## на прибор отопления

### Конвектор серии Гольфстрим

### 722- 20-43.08-19.060-600 ПС

Конвекторы «Golfstream» - отопительные приборы для систем водяного теплоснабжения, монтируемые в пол вдоль окон и стен отапливаемых помещений.

#### 1. НАЗНАЧЕНИЕ

- 1.1. Конвектор предназначен для отопления жилых и административных зданий и используется в двухтрубных (или одноконтурных, без регулирующей арматуры) системах водяного отопления с принудительной циркуляцией теплоносителя.
- 1.2. Конвектор допускается эксплуатировать в системах водяного отопления с температурой теплоносителя до 130 °С и избыточным давлением теплоносителя до 1,6 МПа (16 кгс/см<sup>2</sup>).

#### 2. ОБОЗНАЧЕНИЕ ИЗДЕЛИЯ

**Конвектор КРК(П) 34.11.180 – Ср - F**

**Тип**

КРК(П) – конвектор концевой  
 КРК(П)П – конвектор проходной  
 КРК(П)-СК – конвектор концевой, специальной комплектации  
 КРК(П)П-СК – конвектор проходной, специальной комплектации  
 Примечание: В скобках приборы для влажных помещений

**Габаритные размеры, см**

Глубина: 20; 27; 34; 37; 43  
 Высота: 08; 09; 11; 14; 19

Длина: 060; 070; 080; 090; 100; 110; 120; 130; 140; 150; 160; 170; 180; 190; 200; 210; 220; 230; 240; 250; 260; 270; 280; 290; 300; 310; 320; 330; 340; 350; 360; 370; 380; 390; 400; 410; 420; 430; 440; 450; 460; 470; 480; 490; 500; 510; 520; 530; 540; 550; 560; 570; 580; 590; 600.  
 Конвекторы длиной 320...600 см состоят из двух секций.

**Вариант исполнения решетки**

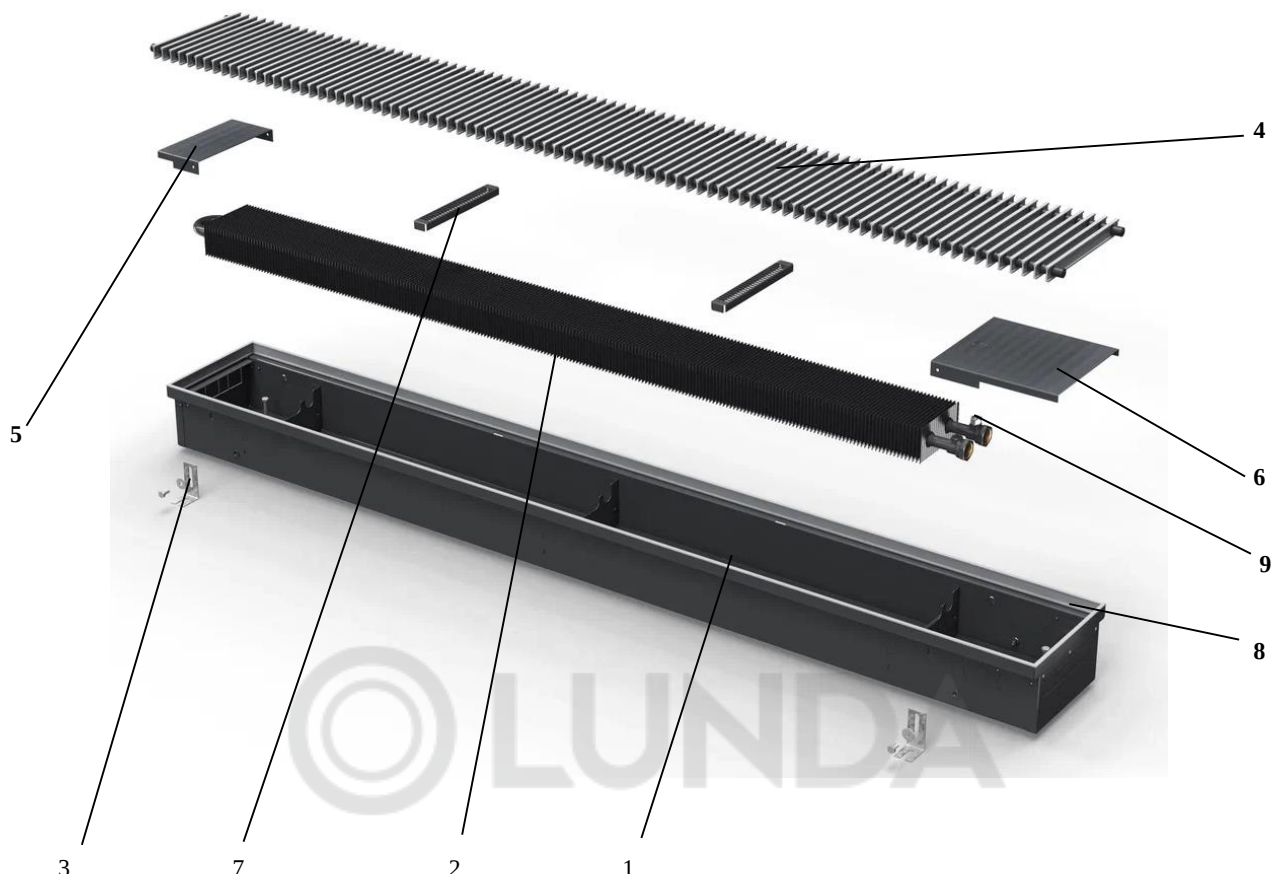

Ср – стальная  
 Ал – алюминиевая  
 АП – алюминиевая, продольная  
 АЭ – алюминиевая на эластичной основе  
 Др – деревянная

**Облицовка периметра корпуса**

по умолчанию - декоративная рамка из планок шириной 5 мм.  
 F - декоративный нащельник из F-образного профиля шириной 18 мм.

### 3. КОМПЛЕКТНОСТЬ ПОСТАВКИ

|                                                    |                                                        |
|----------------------------------------------------|--------------------------------------------------------|
| 1. Корпус установочный                             | 1 шт.                                                  |
| 2. Элемент нагревательный                          | 1 шт.                                                  |
| 3. Кронштейны                                      | 4 шт. (для конвекторов длиной 1600 мм и более – 6 шт.) |
| 4. Решетка                                         |                                                        |
| 5. Крышка защитная                                 | 1 шт.                                                  |
| 6. Крышка защитная                                 | 1 шт.                                                  |
| 7. Распорка монтажная                              | 1-3 шт. (зависит от длины прибора)                     |
| 8. Детали окантовки корпуса из F-образного профиля | 4 шт. (для исполнения F)                               |
| 9. Воздухоотводчик                                 | 1 шт.                                                  |
| Паспорт .....                                      | 1 шт.                                                  |

Сопроводительный талон

1 шт.

Упаковка

1 шт.

### 4. ТЕХНИЧЕСКИЕ ХАРАКТЕРИСТИКИ

4.1. Конвектор состоит из следующих основных элементов (см. рис.1):

- установочного корпуса 1, изготовленного из оцинкованного стального листа с алюминиевой окантовкой
- нагревательного элемента 2, изготовленного из медных труб с алюминиевым оребрением,
- декоративной съемной решетки (стальной, деревянной или алюминиевой) 3.

Установочный корпус, нагревательный элемент и стальная решетка имеют порошковое эпоксиполиэфирное покрытие.

4.2. Для соединения с трубопроводами системы отопления на патрубках конвектора имеется внутренняя резьба G $\frac{1}{2}$ .

4.3. Размеры и технические характеристики изделий представлены на Рис.1-5 и в таблице 1.

4.3. Схемы узлов подключения и теплотехнические характеристики для конвекторов типа:

КРК(П)(П) 20.08(09,11,14,19), КРК(П)(П) 24.08(09,11,14,19), КРК(П)(П) 27.08(09,11,14,19), КРК(П)(П) 30.08(09,11,14,19), КРК(П)(П)34.08(09,11,14,19), КРК(П)(П)37.08(09,11,14,19), КРК(П)(П)43.08(09,11,14,19) в **Приложении 1** к настоящему паспорту.

**Производитель оставляет за собой право вносить изменения в конструкцию прибора не ухудшающие его теплотехнические свойства**

**Примечание к таблице 1:** Номинальный тепловой поток (Q<sub>ну</sub>) на метр теплового пакета, определён при нормированных условиях (ну): температурный напор, равен 70°C, расход теплоносителя через присоединительные патрубки конвектора составляет 0,1 кг /с; атмосферное давление - 1013,3 гПа (760 мм рт.ст.), при размещении элемента нагревательного со стороны наружного ограждения.

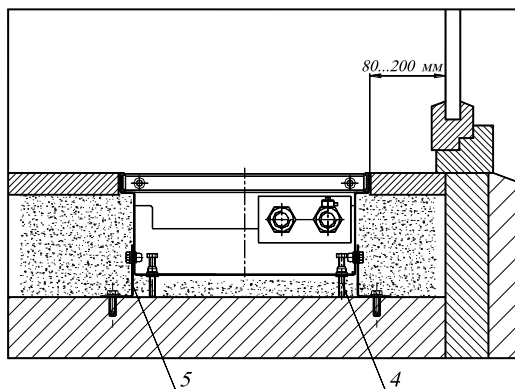

\*Масса может отличаться ±15%.

## 5. МОНТАЖ

- 5.1 Монтаж конвекторов должен выполнять специалист-сантехник согласно требованиям СП 60.13330.2020 -«Отопление, вентиляция и кондиционирование воздуха», СП 73.13330.2016 - «Внутренние санитарно-технические системы», СП 40-108-2004 - «Проектирование и монтаж внутренних систем водоснабжения и отопления зданий из медных труб».

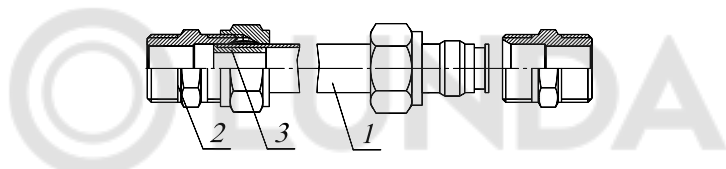

- 5.2 Конвектор монтируется в пол, для этого необходимо установить корпус конвектора в заранее подготовленный канал в полу и выровнять его по уровню чистого пола, с помощью упорных болтов 4. Для конвектора длиной более 3,1 м соединить секции конвектора между собой болтами с гайками. Закрепить конвектор опорами 5 к черновому полу (см. Рис.6).

**Рис.6**

- 5.3 Для исполнения конвектора, состоящего из двух секций Рис.5 при помощи медных труб 15х1 и обжимных фитингов из комплекта монтажных частей, соединить нагревательные элементы секций (рис.7). Для этого необходимо через отверстие в корпусе вставить трубки в патрубки нагревательных элементов, закрутить гайки рукой до упора, после этого гаечным ключом завернуть гайки на 1¼ оборота.

5.4

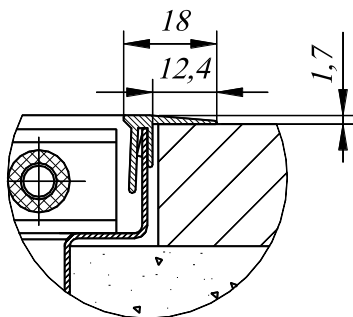

**Рис.7. Соединение нагревательных элементов конвектора.**

1 – медная труба 15х1мм, 2 – Соединитель прямой 15 x 1/2", 3 – Вставка латунная.

- 5.5 Соединить нагревательный элемент с подводящими теплопроводами системы отопления. При соединении конвекторов с подводками следует соблюдать осторожность. Во избежание деформирования тонкостенных медных труб нагревательного элемента и латунных присоединительных патрубков необходимо удерживать шестигранник патрубков гаечным ключом.

- 5.6 Залейте пустое пространство вокруг конвектора бетонным раствором. После укладки напольного покрытия щель между покрытием и конвектором рекомендуется заполнить силиконовым герметиком.

При исполнении F щель закрыть F-образными планками, установив их сверху по периметру корпуса (см. Рис.8).

**Рис.8.**

- 5.7 До окончания отделочных работ закрыть конвектор сверху защитной крышкой (заказывается отдельно) можно использовать упаковочную коробку или подручные материалы.

- 5.8 При запуске системы отопления, по необходимости, выполнить удаление воздуха. Для этого отвернуть иглу воздушопускного клапана 6 (см. рис1) на 0,5-1,5 оборота. После удаления воздуха, клапан закрыть.

При установке прибора во влажном помещении наличие паров агрессивных веществ (к примеру паров хлора, морской воды и т.п.) может стать причиной повреждений окрашенной поверхности или покрытия декоративной решетки, а также может вызвать коррозию корпуса и деталей прибора. Возможно изготовление приборов из нержавеющей стали для эксплуатации в помещениях с повышенной влажностью по предварительному запросу.

## **6. ХРАНЕНИЕ И ТРАНСПОРТИРОВКА**

- 6.1. Хранить конвекторы до начала эксплуатации следует в таре изготовителя, уложенными в штабели.

## 6.2. Условия хранения и транспортирования Ж2 ГОСТ 15150.

Температура воздуха от -50 до +50 °С;

относительная влажность до 100% при 25 °С (среднегодовое значение 80% при 15 °С) в отсутствии атмосферных осадков.

## 7. УСЛОВИЯ ЭКСПЛУАТАЦИИ

**Внимание!** Не допускается эксплуатация конвектора в условиях, приводящих к замерзанию в нем теплоносителя (например, при отключении циркуляции теплоносителя через конвектор и отрицательной температуре окружающего конвектор воздуха), что может привести к разрыву труб.

7.1. Внутренние поверхности конвектора необходимо регулярно очищать от пыли при помощи пылесоса.

7.2. Не допускаются удары и другие действия, приводящие к механическим повреждениям конвектора и его элементов.

7.3. Отопительные приборы должны быть постоянно заполнены водой, как в отопительные, так и в межотопительные периоды.

7.4. При использовании в качестве теплоносителя воды её параметры должны удовлетворять требованиям, приведенным в «Правилах технической эксплуатации электрических станций и сетей РФ» (Приказ Минэнерго от 04.10.2022 N1070), СП40-108-2004 Проектирование и монтаж внутренних систем водоснабжения и отопления зданий из медных труб.

7.5 Не допускается эксплуатация отопительных приборов при параметрах давления и температуры выше указанных в настоящем паспорте.

7.6 Допускается использование в качестве теплоносителя специальных антифризных жидкостей для отопительных систем из медных труб.

7.7 Остальные указания по эксплуатации конвектора в соответствии с ГОСТ 31311.

7.8 После окончания монтажных работ должны быть произведены гидравлические испытания и составлен акт ввода конвектора в эксплуатацию.

## 8. СВИДЕТЕЛЬСТВО О ПРИЕМКЕ

Конвектор «Гольфстрим» соответствует ГОСТу 31311 – сертификат соответствия № РОСС RU.НА54.В00018/23 и признан годным к эксплуатации. Номер партии, дата изготовления (сборки) и отметка о приёмке службой технического контроля указаны в сопроводительном талоне.

## 9. ГАРАНТИИ ИЗГОТОВИТЕЛЯ

9.1 Производитель гарантирует ремонт или замену вышедших из строя конвекторов в течение гарантийного срока при отсутствии механических повреждений, наличии сопроводительного талона, акта введения в эксплуатацию и соблюдения потребителем правил монтажа и эксплуатации по ГОСТ 31311.

9.2 Гарантийные обязательства не распространяются на конвектор если он был отремонтирован или в конструкцию были внесены изменения без согласования с производителем.

Гарантийные обязательства не распространяются на дефекты, возникшие в результате попадания на прибор абразивных и химически-агрессивных средств.

9.3 Конвектор не подлежит гарантийному обслуживанию при утере сопроводительного талона или отсутствии в нём отметки о приёмке и печати службы технического контроля.

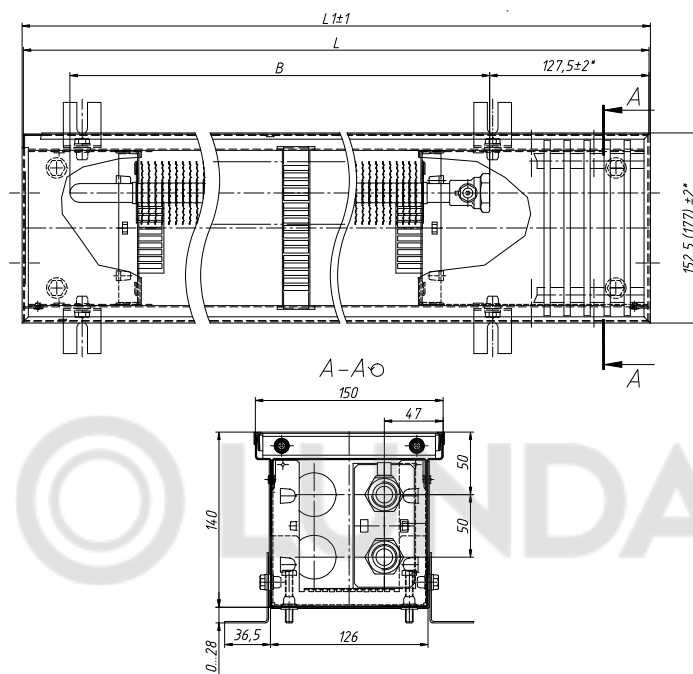

9.4 Гарантийный срок эксплуатации конвекторов – 10 лет со дня продажи при условии хранения не более 1 года.

**Варианты подключения конвекторов  
с запорно-регулирующей арматурой к системе отопления**

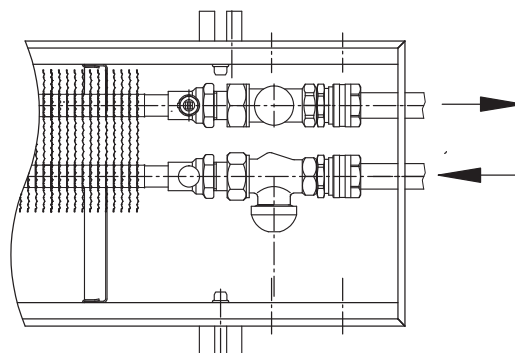

**КРК 20 (24, 27). 08 (09, 11)**

**Схема 1**

Обратная линия:

1. Клапан запорный  
Герц RL-1 проходной 1/2 1372341
- Подающая линия:

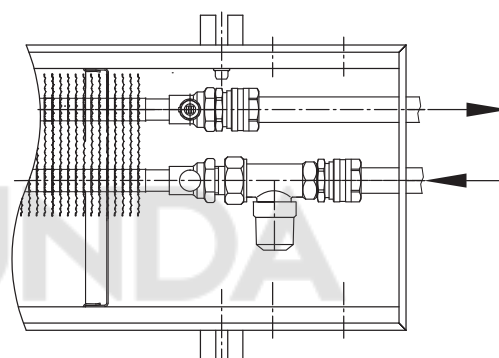

2. Клапан термостатический  
Герц TS-90-V проходной 1/2  
1 7723 67

**Схема 2**

Подающая линия:

1. Клапан терморегулятора  
Дanfoss RTR-N 15 прямой  
013G7014

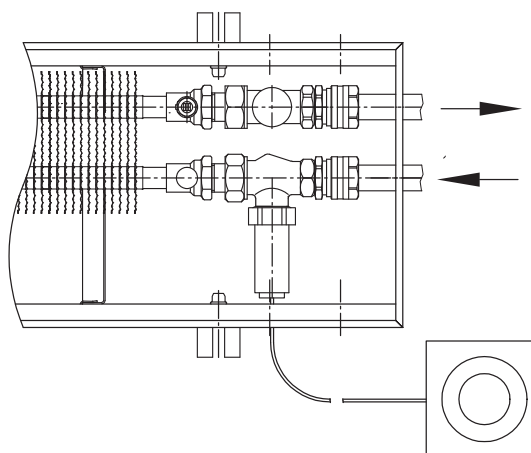

**Схема 3**

Обратная линия:

1. Клапан запорный  
Герц RL-1 проходной 1/2 1 3723 41

Подающая линия:

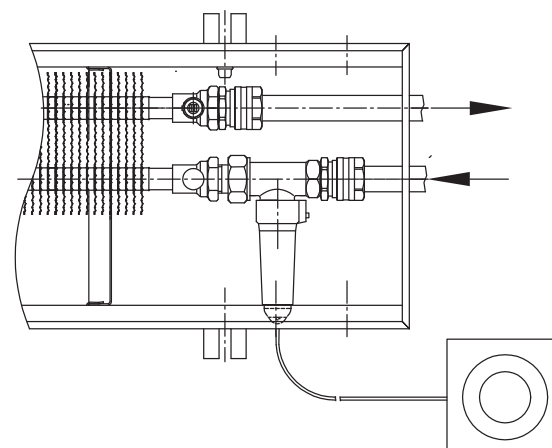

2. Клапан термостатический  
Герц TS-90-V проходной 1/2  
1 7723 67
3. Головка термостатическая  
с дистанционной регулировкой  
Герц Design 1 9330 05  
Длина капиллярной трубки 2 м

**Схема 4**

Подающая линия:

1. Клапан терморегулятора  
Дanfoss RTR-N 15 прямой  
013G7014
2. Термостатический элемент  
Дanfoss RA 5062 013G5062  
Длина капиллярной трубки 2 м

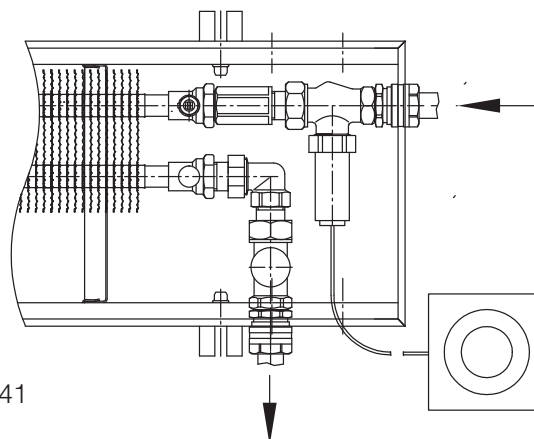

### Схема 5

Подающая линия:

1. Удлинитель 1/2x40 Valtek VTr. 197
2. Клапан термостатический  
Герц TS-90-V проходной 1/2 1 7723 67
3. Головка термостатическая с дистанционной  
регулировкой Герц Design 1 9330 05  
Длина капиллярной трубки 2 м

Обратная линия:

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан запорный Герц RL-1 проходной 1/2 1372341

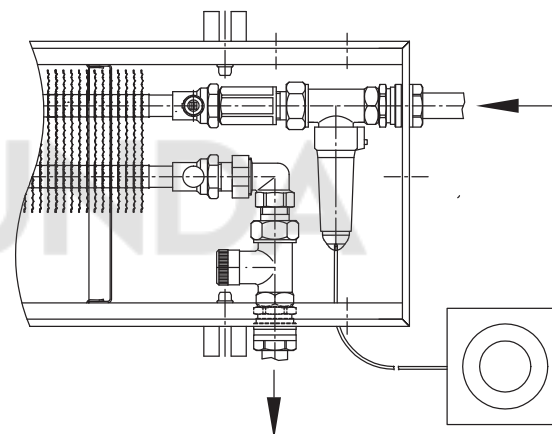

### Схема 6

Подающая линия:

1. Удлинитель 1/2x40 Valtek VTr. 197
2. Клапан терморегулятора  
Данфосс RTR-N 15 прямой 013G7014
3. Термостатический элемент  
Данфосс RA 5062 013G5062  
Длина капиллярной трубки 2 м

Обратная линия:

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан запорный  
Данфосс RL V прямой 15 003L0144

## КРК 24 (27). 08 (09, 11)

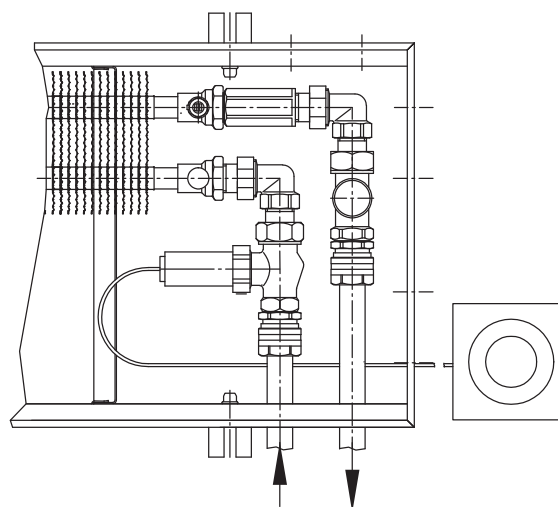

### Схема 7

Обратная линия:

1. Удлинитель 1/2x50 Valtek VTr. 197
2. Сгон угловой 1/2 Valtek VTr. 098
3. Клапан запорный Герц RL-1  
проходной 1/2 1372341

Подающая линия:

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан термостатический  
Герц TS-90-V проходной 1/2 1 7723 67
3. Головка термостатическая с дистанционной  
регулировкой Герц Design 1 9330 05  
Длина капиллярной трубки 2 м

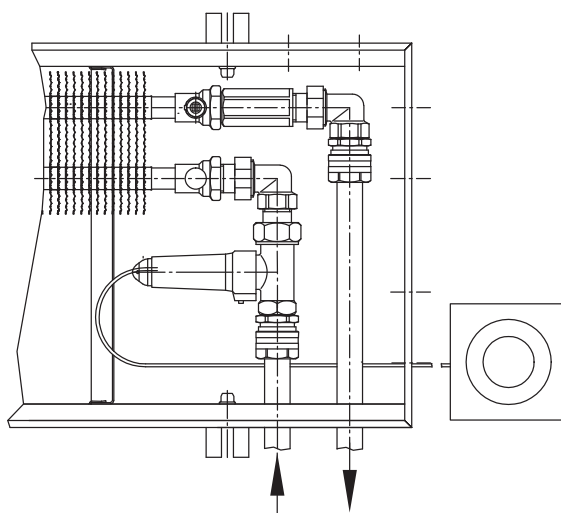

### Схема 8

Обратная линия:

1. Удлинитель 1/2x50 Valtek VTr. 197
2. Сгон угловой 1/2 Valtek VTr. 098

Подающая линия

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан терморегулятора  
Данфосс RTR-N 15 прямой  
013G7014
3. Термостатический элемент  
Данфосс RA 5062 013G5062  
Длина капиллярной трубки 2 м

### КРК 20 (24, 27).14 (19)

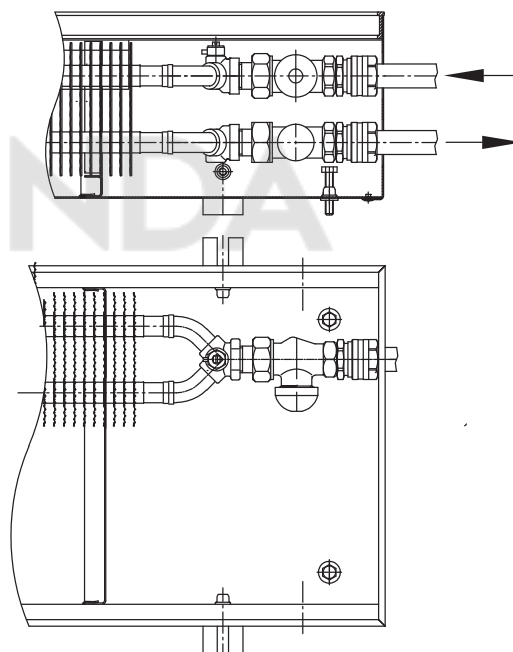

### Схема 9

Подающая линия:

1. Клапан термостатический  
Герц TS-90-V проходной 1/2  
1 7723 67

Обратная линия:

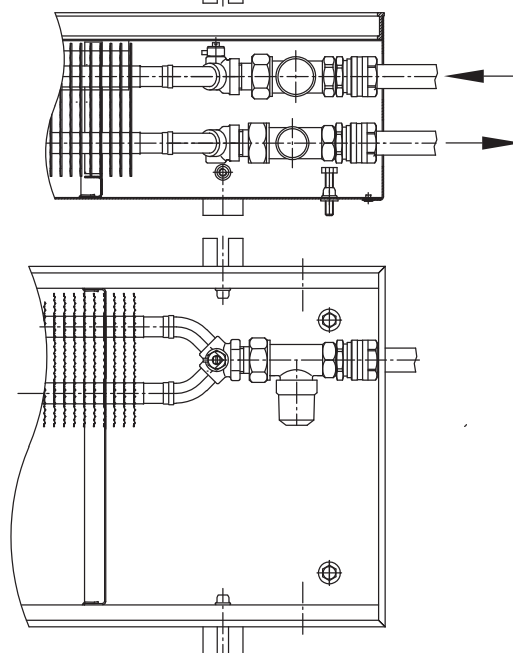

1. Клапан запорный Герц RL-1  
проходной 1/2 1 3723 41

### Схема 10

Подающая линия

1. Клапан терморегулятора  
Данфосс RTR-N 15 прямой  
013G7014
2. Клапан запорный  
Данфосс RL V прямой 15 003L0144

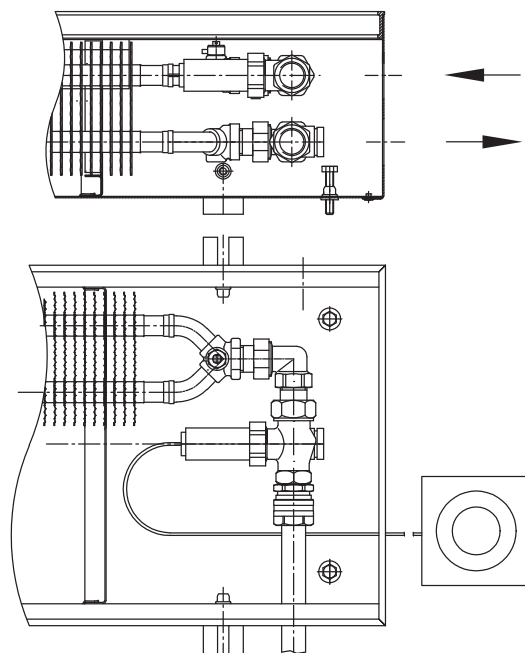

### Схема 11

Подающая линия:

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан термостатический  
Герц TS-90-V проходной 1/2 1 7723 67
3. Головка термостатическая с дистанционной  
регулировкой Герц Design 1 9330 05  
Длина капиллярной трубки 2 м

Обратная линия:

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан запорный Герц RL-1  
проходной 1/2 1372341

### Схема 12

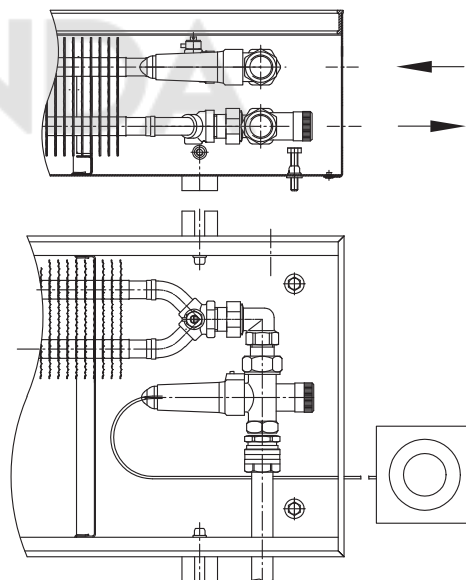

Подающая линия:

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан терморегулятора  
Данфосс RTR-N 15 прямой  
013G7014

3. Термостатический элемент  
Данфосс RA 5062 013G5062  
Длина капиллярной трубки 2 м

Обратная линия:

1. Сгон угловой 1/2 Valtek VTr. 098
2. Клапан запорный  
Данфосс RL V прямой 15 003L0144

Варианты подключения к системе отопления конвекторов КРК 34(37, 43).08(09, 11) аналогичны схемам 1-8.

Варианты подключения к системе отопления конвекторов КРК 34(37, 43).14(19) аналогичны схемам 9-12.
